Language

Niveau B2
CLES / TOEIC

Soft skills

Self-driven

Determined

Adaptable

Centres d'intérêt

DIY

Sports

Science & Tech

Skills

Embedded Systems
Electronic
Language
Tools

STM32, ESP32, RTOS, UART, SPI, I2C, CAN
Analog, Digital, HF
C, C++, Python
Autodesk Fusion, KiCAD, VSCode, Git

Work Experience

Noosh

10/2025

Funder & Embedded Systems Engineer / Product Developer

- Designed and developed a connected multi-display hardware product.
- Developed embedded firmware, mobile applications, electronic hardware, and mechanical components.
- Managed supplier sourcing, Design for Manufacturing (DfM) considerations, and small-batch production preparation.
- Selected for incubation at Euratechnologies.

Kappa Data France

06/2025 – 10/2025

Embedded Systems Engineer

Lomme

- Managed the development of a railway tamping machine simulator, from requirements engineering to final implementation.
- Designed electronic hardware, including schematic design, PCB layout, and hardware validation.
- Developed ESP32-based embedded firmware for Bluetooth Low Energy (BLE) data monitoring.

MDoloris Medical Systems

09/2023 – 06/2025

Embedded Systems Engineer

Loos

- Led embedded firmware development for medical devices.
- Ported and optimized complex algorithms on STM32-based platforms.
- Refactored and unified firmware architectures to improve scalability.
- Developed Python-based tools for automated validation, testing, and system monitoring.
- Authored technical documentation supporting CE marking and FDA regulatory submissions.

IRCICA – CNRS

09/2022 – 09/2023

Embedded Systems Engineer

Villeneuve-d'Ascq

- Designed a multi-band electric field measurement system operating up to 6 GHz.
- Developed real-time embedded firmware on STM32 platforms.
- Developed a GUI for real-time monitoring and visualization of measurement data.
- Designed RF hardware, including schematic design, PCB layout, and manufacturing support.
- Conducted RF characterization, testing, and validation using spectrum analyzers.

Laboratoire Atmosphères, Observations Spatiales – CNRS

07/2021 – 07/2022

Embedded Systems Engineer

Guyancourt

- Designed and developed a control and test equipment for a subsystem of the MIRS instrument within the Martian Moons eXploration (MMX) mission.
- Developed real-time embedded firmware on STM32 microcontrollers.
- Developed a graphical user interface (GUI) for system control and monitoring.
- Designed digital electronic hardware, including schematic capture, PCB layout, and manufacturing follow-up.
- Performed integration, testing, and validation of the MIRS system using electronic laboratory equipment.

Education

Master's Degree in Embedded Systems Engineering : Esix Normandie – Caen

2017 – 2020

ATS Preparatory Class (Advanced Technical Studies) : César Baggio – Lille

2016 – 2017

Higher National Diploma (BTS) in Electronics : Ozanam – Lille

2012 – 2014
